

REQUEST FOR PROPOSAL RESPONSE

Northstar Digital Solutions

Strong enterprise proposal with complete evidence across all five criteria.

1. Technical Capability

Cloud-native platform using containers, PostgreSQL, Redis and REST APIs. Supports horizontal scaling, CI/CD, Microsoft Entra ID through OAuth 2.0/OIDC, documented APIs, and separate development, test and production environments.

2. Implementation Plan

20-week delivery: discovery 3 weeks, design 2, configuration/integration 6, system testing 3, UAT 3, production readiness 2, go-live/hypercare 1. Team: project manager, solution architect, two engineers, QA lead and change lead. Weekly steering and RAID management.

3. Commercial Value

Fixed implementation fee INR 48,00,000; annual support INR 9,60,000. Payment milestones and assumptions are explicit. Third-party licensing and travel are separate. Defect correction is included; scope changes use formal change control.

4. Security & Compliance

ISO 27001-aligned controls; encryption at rest/in transit, RBAC, MFA, audit logging, vulnerability scanning and annual penetration testing. India data hosting and a four-hour critical-incident notification target are stated.

5. Support & Experience

11 years' experience. Three comparable enterprise projects are described, including a utility collections platform for a 1.2 million-customer organization. Two customer references are available.

6. Risks, Assumptions & Dependencies

Risks: customer identity-provider configuration and timely UAT participation. Mitigations include early integration testing and a UAT readiness checklist.

7. Executive Summary

Comprehensive proposal with clear delivery, technical architecture, security controls and transparent commercial assumptions.
