

REQUEST FOR PROPOSAL RESPONSE

RapidCore Technologies

Low-cost proposal intentionally containing major omissions for risk and validation testing.

1. Technical Capability

Hosted browser application with standard API integration. Claims scalability and security but supplies no architecture, database details, capacity figures, integration specifications, disaster-recovery design or availability target.

2. Implementation Plan

States 10-week implementation with only setup, configuration and deployment phases. No detailed milestones, named roles, testing plan, UAT plan or cutover plan. Customer must provide technical and business resources.

3. Commercial Value

Implementation INR 18,00,000; annual support INR 12,00,000. Price is indicative and may change after discovery. Hosting, integrations, custom development, migration and travel are excluded. No detailed payment schedule.

4. Security & Compliance

Only says it follows industry-standard security practices. No certification, privacy statement, encryption specification, access model, audit logging, penetration testing evidence, hosting location or incident-response commitment.

5. Support & Experience

Claims enterprise software experience but gives no project count, customer references, project descriptions, team biographies or measurable outcomes.

6. Risks, Assumptions & Dependencies

Material risks: missing security evidence, unclear hosting/privacy controls, unpriced integrations, undefined migration scope, no detailed implementation plan and indicative pricing.

7. Executive Summary

Low headline implementation cost, but substantial technical, security, delivery and commercial questions remain unanswered.
