

REQUEST FOR PROPOSAL RESPONSE

ApexGrid Software

Technically mature and security-heavy proposal with higher cost and longer implementation.

1. Technical Capability

Kubernetes-based microservices using Java, PostgreSQL and Kafka. REST and event interfaces, active-active deployment, automated scaling, observability and infrastructure-as-code. Target throughput is 500 requests/second. DR design states RPO 15 minutes and RTO 2 hours.

2. Implementation Plan

28-week implementation: architecture/discovery 6 weeks, build/integration 10, system/performance testing 5, UAT 4, transition 3. Large technical team and architecture review board. Customer decisions required within five business days.

3. Commercial Value

Implementation INR 72,00,000; annual support INR 14,00,000. Cloud infrastructure and managed Kubernetes are additional. Detailed rate card and optional modules supplied. Formal change-control process.

4. Security & Compliance

ISO 27001 certification and SOC 2 Type II attestation. Encryption, audit logs, SAST/DAST, annual penetration testing, secrets management, MFA, RBAC and incident response are documented. India cloud regions are specified.

5. Support & Experience

Nine years' experience and six comparable enterprise implementations. Three examples include project sizes, technology stacks and measurable outcomes. Customer references available after shortlisting.

6. Risks, Assumptions & Dependencies

Risks: higher total cost, additional cloud charges and longer delivery. Schedule depends on customer decisions within five business days.

7. Executive Summary

Highly detailed technical and security proposal, offset by higher cost and longer delivery duration.
